

Configuring medications

Social&Care

User Guide

Support Team

With Social&Care you can configure your relatives' medications

Social Care will remind you and your loved ones when they have a medication intake

To do this, you must configure your relative's medications in Social&Care

Creating medications is very simple

1.- Creating the medication

Medication information depends on your needs:

- Detailed - You can set up all pills information and dosis
- General - You can configure a simple reminder for the user

Medications have a pattern to schedule the different doses in the user agenda

Let's create a new medication!

On your device, select Settings from the Social&Care main menu

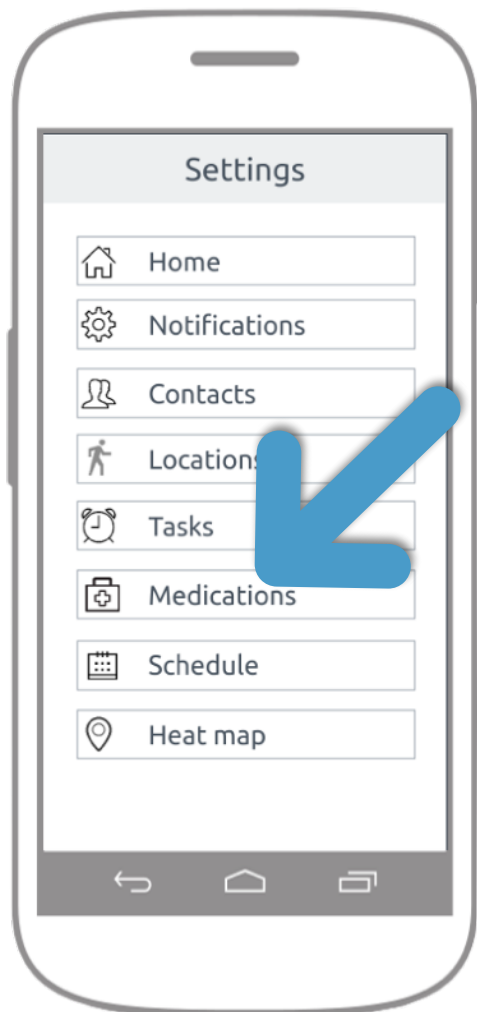

User Guide

Support Team

Select the person you want to create the task for.

(If you have not yet paired with your loved one's device, first consult our **Pairing devices tutorial**)

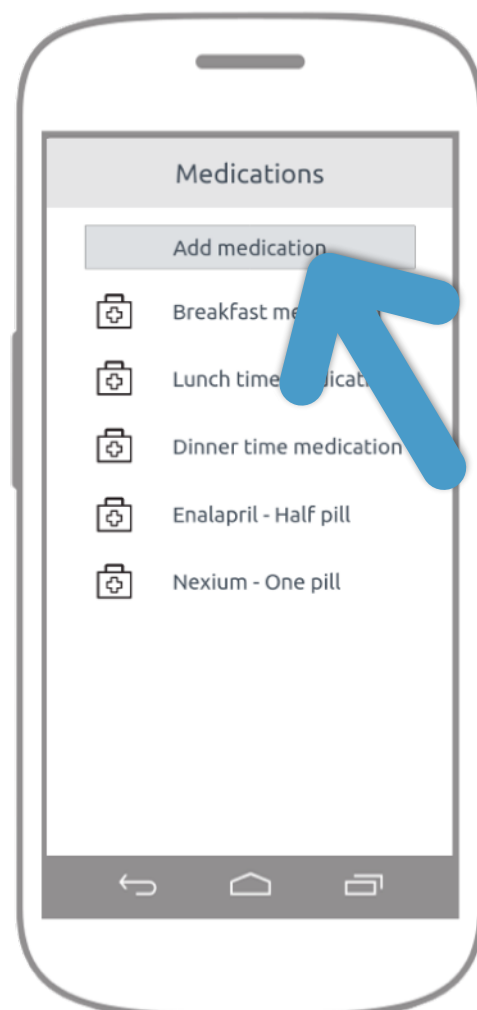

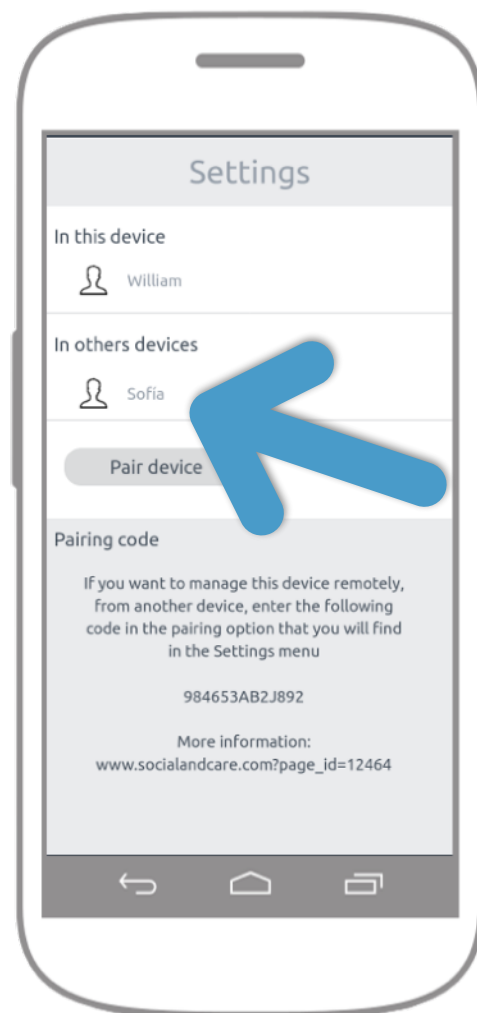

Now, you are remotely configuring your relative's settings.

Press the **Medications** button

In this screen you can see all the medications you have created before.

Let's create a new one!

Click on the **Add Medication** button

2.- Configuring medication pattern

Title
Enter a description that the user understand. Reminders sent by Social&Care will contain this description.

Start date
Is the date when the treatment begins.

End Date
If known, the date when the treatment ends

Repeat
Select the days of the week the user has to take the medication.
Social&Care will schedule every intake in the user agenda.

Intake
Create one doses for each intake the users have along the day

Pattern data

Don't forget to save changes!

3.- Check the user schedule

To make sure that the medications have been added correctly in the user's calendar, we will consult the schedule.

In the User Settings menu, select Schedule

A list of user's tasks and medication, sorted by day and time, will be displayed.

Reminder

Each medication intake will appear individually in the user schedule.

Repeat this process for each user medication
