

Pairing devices

Social&Care

User Guide

Support Team

Activity patterns contain the activity performed throughout the day by your loved one

Social Care compares users real activity with their programmed one, and notify us of everything they do or if they are in an unusual situation

For this, our device and the user's one must be paired

Pairing process is very simple:

1.- Create user accounts

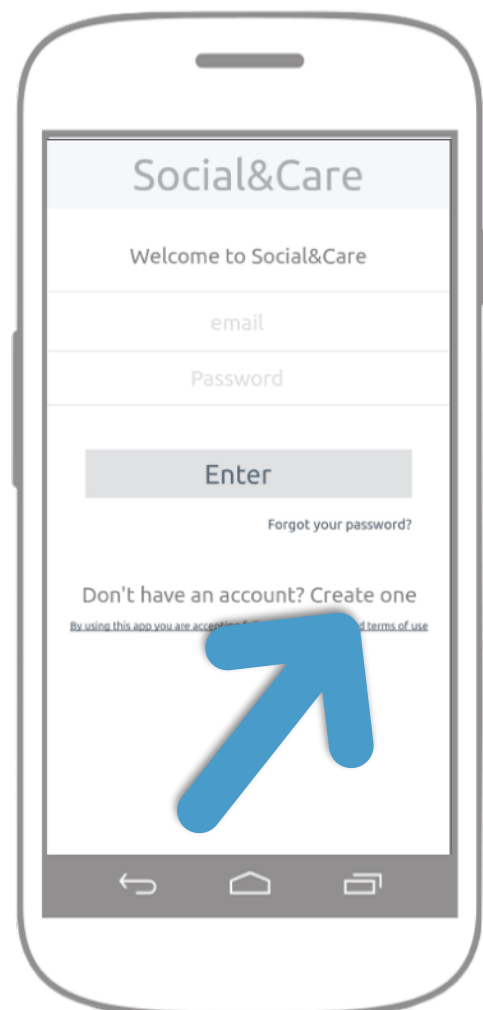

Download Social&Care on both your smartphone as on your loved one's device

Create a user account for you and another one for your relative

(Click on "Create one" and follow the instructions)

Sign in to your smartphone with your user account.

Sign in to your relative's device with the user you have created for him.

2.- Copy pairing code

On your relative's device, select **Settings** option in the main menu of Social&Care

You will see the pairing code at the bottom of the screen. **Copy it!**

Make sure to copy correctly letters and numbers. Code is case sensitive

3.- Paste pairing code

On your smartphone, select Settings option in the main menu of Social&Care

Click the Pair Device button in the middle of the page

Enter the code you copied previously in the text-box of the new window and press Save Changes button.
